present the
Fenix MiniATD

Miniaturized diffusive (passive) sampler for Fenix MiniPASS

Fenix MiniPASS (Miniaturized Personal Air Sampling System):

User-friendly personal sampling system for true breathing-zone measurements.

Allows measurements inside personal protection equipment.

Convenient, adjustable head-set.

For passive (diffusive) and pumped sampling.

Comes with dual flexible sampler holders for two parallel samples.

Can be used with a large number of pumped and passive samplers for particles, vapors and gases.

Now presenting the Fenix MiniATD for the MiniPASS system:

Fenix MiniATD is a miniaturized diffusive (passive) sampler for volatile organic compounds. Samples are analyzed using Automatic Thermal Desorption (ATD) with standard ATD tubes. The sampler is validated according to International Standards and has been evaluated in field studies. Holder for non-breathing zone sampling available.
